Outstanding insect control with low environmental impact

Acelepryn® Turf Insecticide

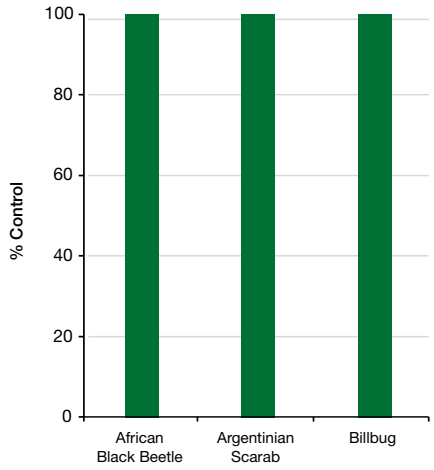
syngenta®

ACELEPRYN® Turf Insecticide provides unmatched, season long grub and caterpillar control with a single application. The benefits are protection for your turf against key insect pests as well as peace of mind that you are looking after yourself, your staff and people enjoying the greenspace.

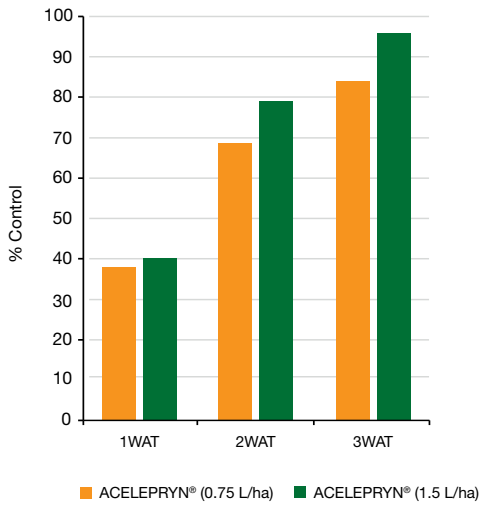
What ACELEPRYN® offers you:

- Up to 6 months protection at the higher application rate
- A product exempt from poison scheduling with high turf safety and low environmental impact
- Ease of use with no re-entry periods and no PPE requirements
- Controls a wide range of turf pests such as larvae of African Black Beetle, Argentinian Scarab, Billbugs as well as Cutworm, Armyworm and Webworm with a single application

Six Months Control of Larvae



Rapid and Long Lasting Curative Control of Armyworm



®

SpraySURE | Accuracy and Performance

To achieve great results, accurate application is important.

Target	Syngenta Nozzle	Optimal Water Rate	Optimal Pressure Range
Root and soil (So)	XC 08	450 to 890 L/ha	2 to 4 bar
Leaf and crown (F)	XC 04 or XC 025	> 400 L/ha	2 to 4 bar

ACELEPRYN® is very active against 1st and 2nd instar larvae of the most destructive turf infesting grub species. The window for application should thus be positioned around the peak egg laying period by adult beetles. This timing can be monitored by the increasing activity of adult beetles, usually during spring and early summer. ACELEPRYN® will provide excellent curative caterpillar control in turfgrass and should be applied when pests/damage is observed.

Example: African Black Beetle egg laying traditionally peaks around October whereas that of the Argentinian Scarab peaks around November to early December. A single application at 1.5 L/ha in early spring (September) should be sufficient to ensure control of both species the entire season.

Target Pests	Rate	SpraySure
Beetle larvae including African Black Beetle, Argentinian Scarab as well as Argentine Stem Weevil larvae and Billbug larvae	0.75 to 1.5 L/ha	So
Caterpillars including Black Cutworm, Lawn Armyworm, Sod Webworm	750 mL/ha	F

Refer to the registered label for full details and instructions for use. F = Foliar applied So = Soil applied Su = Surfactant required

Active Ingredient

ACELEPRYN® contains 200 g/L chlorantraniliprole, a member of the anthranilic diamide insecticides

GROUP 28 INSECTICIDE

Formulation and Packaging

Available in 100 mL, 750 mL and 5 L

Suspension concentrate (SC) with minimal odour and excellent suspensibility in spray mixtures (excluding liquid calcium products).
